

## Project Data Sheet

### PROJECT

#### Discharge Consent Applications

### CLIENT

- Sewerage
- Rivers
- Coastal
- SUDS
- Land Drainage
- Hydraulic Modelling
- Flood Risk Assessments
- Drainage Area Planning
- Asset Management
- Flood Alleviation
- Flooding Investigations
- Feasibility Study
- Drainage Design
- Environmental Aspects
- Inundation Modelling
- Surface Water Management

**This project was to prepare Discharge Consent Applications for any previously unconsented Combined Sewer Overflows and Emergency Overflows within the Southern Water region.**

Richard Allitt Associates were commissioned by Southern Water to undertake a review of all of their Combined Sewer Overflows and Emergency Overflows to identify which overflows were unconsented. Once all of the unconsented overflows had been identified the next stage of the project was to complete the Discharge Consent Applications Forms for submission to the Environment Agency.

To assist in the completion of the Discharge Consent Application Forms a database was designed and built to hold all the required data and from this database the various forms were completed via mail merging.

During the project it was found that some of the required data was missing and in some cases there was conflicting data as to whether an overflow was still in operation. It became necessary to commission a number of surveys of many CSO's and pumping stations to collect the missing data.

The Completed Discharge Application Forms and the associated plans were submitted by Southern Water to the Environment Agency.

Richard Allitt Associates Ltd  
Suite 3, The Forge Offices,  
Cuckfield Road,  
Staplefield, Haywards Heath,  
West Sussex, RH17 6ET
